

# AB MECHANIZATION

Engr. Alexis T. Belonio, MS, ABE, ASEAN Engineer  
*Freelance Consultant and Technology Developer; Former  
Senior Research Fellow (PhilRice) and  
Associate Professor (Central Philippine University)  
Member: PSABE, ASABE, ASME*

2

1. An Agricultural Engineer can stamp his duly registered seal on the designs and plans of agricultural machines \_\_\_\_.

- a. after passing the board exam
- b. even with expired license
- ☒ c. only during the validity of his professional license
- d. None of the above

2. Credential issued to applicants after passing the licensure examination upon payment of registration fees.

- ☒ a. Certificate of registration
- b. Professional license
- c. Seal
- d. All of the above

3. Credential issued to the registrant indicating the registration number, date of issuance, and expiry date upon payment of professional fee.

- a. Certificate of registration
- ☒ b. Professional license
- c. Seal
- d. All of the above

4. An agricultural engineer is required to indicate his \_\_\_\_ on the documents he signs in connection with the practice of his profession.

- a. professional license number
- b. duration of validity of the license
- ☒ c. professional tax receipt number
- d. All of the above

5. All drawings, specifications and other documents to be used for the design, construction, test, and evaluation related to agricultural engineering \_\_\_\_.

- a. will only require the signature of a licensed Agricultural Engineer
- b. will only require the seal of a licensed Agricultural Engineer
- ☒ c. will require the signature and seal of a licensed Agricultural Engineer
- d. All of the above

3

6. Once the drawing and specifications are duly signed and stamped by an Agricultural Engineer, \_\_\_\_.

- ☒ a. the document becomes property of the client once paid
- b. the document becomes his property whether it is executed or not
- c. the document becomes a public domain for use by anybody
- d. None of the above

7. Which of the following is not the role of ABE in farm mechanization?

- a. Applying engineering principles to optimize agricultural processes.
- b. Developing and implementing innovative technologies addressing challenges like climate change.
- c. Promoting sustainable practices for increase efficiency and food security.
- ☒ d. All of the above
- e. None of the above

8. ASABE stands for \_\_\_\_.

- a. American Society of Automotive and Biosystems Engineers
- ☒ b. American Society of Agricultural and Biological Engineers
- c. American Society of Agricultural and Biosystems Engineers
- d. All of the above

9. Which of the following is the detailed role of ABE in farm mechanization?

- a. Technology innovation by developing and adapting new technologies to improve farm mechanization.
- b. Efficiency and productivity by helping farmers select the appropriate machinery and equipment they need.
- c. Addressing challenges related to food security, climate change affecting agricultural production.
- d. Collaborate with farmers, researches and other stake holders to develop and implement solution for farm mechanization.
- ☒ e. All of the above
- f. None of the above

4

10. Which of the following is not ABE role in farm mechanization?

- a. Develop solutions to water management, soil conservation, and pest control, contributing to sustainable agriculture.
- b. Play a role in policy development and advocacies promoting the importance of farm mechanization for agricultural development.
- c. Explore renewable energy sources and sustainable practices to minimize environmental impact and reduce cost.
- d. All of the above
- e. None of the above

11. Who has the ability to apply engineering design to produce solutions that meet specified needs with consideration of public health, safety, and welfare, as well as global, cultural, social, environmental, and economic factors in agriculture?

- a. Agricultural and Biosystems Engineer
- b. Food Engineer
- c. Environmental Engineer
- d. Aquacultural and Fishery Engineer
- e. None of the above

12. Field of study and application of engineering science and design principles for agriculture purposes, combining the various disciplines of mechanical, civil, electrical, food science, environmental, software, and chemical.

- a. Agricultural and Biosystems Engineering
- b. Mechanical Engineering
- c. Civil Engineering
- d. Chemical Engineering
- e. Electrical Engineering
- f. None of the above

13. Which of these responsibilities applies to ABE Local Government Units?

- a. Prepare engineering plans, designs, and specifications.
- b. Manage programs and projects.
- c. Implement standards, regulation, and enforcement of ABE Projects.
- d. All of the above
- e. None of the above

5

14. While the DA helps farmers produce better yield in crop production, the ABE unit under the office of the governor, city or municipal mayor is responsible for:

- a. The preparation of engineering plans, designs, and specifications.
- b. Carrying out program and project management
- c. Ensuring standards, regulation, and enforcement of the project.
- d. All of the above
- e. None of the above

15. Which of the programs of the Department of Agriculture (DA) helps farmers to have a great yield in their crop production?

- a. National Rice Program
- b. National Corn Program
- c. National Livestock Program
- d. National High-Value Crops Development Program
- e. Promotion and Development of Organic Agriculture Program

f. National Urban and Peri-Urban Agriculture Program

- g. All of the above
- e. Four of the above

16. What is the importance of the introduction of Agricultural Engineering in the Philippines?

- a. Helps meet the demands of the farmers in increasing their income, b. Helps reduce drudgery and increase labor productivity of farmers.
- b. Helps in the reduction of production and postproduction losses.
- c. All of the above
- d. Two of the above

17. Which of the enumerated approaches applies to achieving reduction of drudgery, or tedious and repetitive manual labor in agriculture?

- a. Utilization of tools and machinery that automate or streamline tasks
- b. Adopting efficient farming methods
- c. Improve access to resources and information
- d. All of the above
- e. None of the above
