2

1. Mechanical manipulation of soil for any desired purpose.

- a. Land grading
- ☒ b. Tillage
- c. Earth moving
- d. None of the above

2. Operation that constitutes the initial major soil working operation.

- ☒ a. Primary tillage
- b. Secondary tillage
- c. All of the above
- d. None of the above

3. Operation intended to create refined soil conditions.

- ☒ a. Primary tillage
- ☒ b. Secondary tillage
- c. All of the above
- d. None of the above

4. Primary tillage operation includes ____.

- a. pulverizing
- b. mulching
- ☒ c. plowing
- d. All of the above

5. Secondary tillage operation includes ____.

- a. listing
- ☒ b. subsoiling
- ☒ c. harrowing
- d. All of the above

6. Tillage or soil preparation in which plant residues are specifically left on or near the surface.

- ☒ a. Strip tillage
- ☒ b. Mulch tillage
- c. Optimum tillage
- d. None of the above

Copyright 2025: Alexis T. Belonio

3

7. Primary or secondary tillage implement used for broadcast or for strip tillage and also used as a chemical incorporator prior to planting.

- ☒ a. Roller tiller
- b. Roller harrow
- c. Packer
- d. None of the above

8. Secondary tillage implement consisting of one or two in-line gang rollers used for crushing soil clods and for compacting the soil.

- ☒ a. Roller tiller
- ☒ b. Packer
- c. Roller harrow
- d. None of the above

9. Tillage and land-forming operation using a tool that splits the soil and turns two furrows laterally in opposite directions, thereby providing a ridge-and-furrow soil configuration.

- ☒ a. Listing
- b. Harrowing

- c. Chiseling
- d. None of the above

10. Secondary-tillage operation that pulverizes, smoothens and packs the soil during seedbed preparation and also controls weeds.

- ☒ a. Harrowing
- b. Listing
- c. Chiseling
- d. None of the above

11. The deep chiseling, below 16 inches, for the purpose of loosening the soil for root growth and/or for water movement.

- a. Ridging
- b. Chiseling
- ☒ c. Subsoiling
- d. None of the above

12. Secondary-tillage implement used to stir the soil using multiple number of disk blades arranged on a gang.

- a. Spike-tooth harrow
- ☒ b. Disk harrow
- c. All of the above
- d. None of the above

Copyright 2025: Alexis T. Belonio

4

13. Tillage implement which shatters the soil without complete burial or mixing of surface materials.

- a. Chisel plow
- b. Lister plow
- c. Disk plow
- d. None of the above

14. Primary-tillage equipment used for small rice fields.

- a. Moldboard
- b. Rotary
- c. Spiral
- d. All of the above

15. Primary-tillage plow for rice farming that is attached to the power tiller as a replacement for the cage wheel.

- a. Rotary plow
- b. Spiral plow
- c. Disk plow
- d. All of the above

16. Machine designed for use with small plow or harrow.

- a. Puddling-type floating tiller
- b. Power tiller
- c. Hydro tiller
- d. All of the above

17. Secondary-tillage implement used to stir the soil using multiple number of disk blades arranged on a gang.

- a. Spike tooth harrow
- b. Disk harrow
- c. Two of the above
- d. None of the above

18. Hand-operated tractor suitable for both primary and secondary tillage and is used when the field has been soaked for at least half a day to soften the soil.

- a. Power tiller
- b. Puddling-type floating tiller
- c. Reaper
- d. None of the above

5

19. Equipment used to place seeds in furrow.

- a. Planter
- b. Seeder
- c. Broadcaster
- d. All of the above

20. Equipment used to place plant parts to a prepared furrow.

- a. Planter
- b. Seeder
- c. Broadcaster
- d. All of the above

21. Which of the following is a classification of seeder according to method of seeding?

- a. Drill - *1 hole*
- b. Field Distributor - *uniform*
- c. Broadcaster - *subway*
- d. All of the above

22. Farm implement used for secondary tillage in which the name refers to shanks that pierce the soil as they are linearly dragged through.

- a. Cultivator
- b. Seeder
- c. Weeder
- d. None of the above

23. Mechanically-operated machine that removes weeds or grasses from the crops.

- a. Seeder
- b. Weeder
- c. Cultivator
- d. None of the above

24. Machine used to kill weed seeds by microwave heating during weeding.

- a. Zapper
- b. Microwave oven
- c. Flame thrower
- d. All of the above

Copyright 2025: Alexis T. Belonio

6

25. Equipment that breaks the liquid droplets to an effective size and distributes them uniformly over the surface or space to be protected, and regulates the amount of chemical solution to avoid excessive application that might prove harmful or wasteful.

- a. Duster
- ☒ b. Sprayer
- c. All of the above
- d. None of the above

26. A sprayer apparatus consisting of pressure source as well as controlling and specifically employing an over-the-crop boom with automizer arranged in order to provide uniform coverage of the treated surfaces.

- ☒ a. Boom sprayer
- b. Knapsack sprayer
- c. Compressed-air sprayer
- d. None of the above

27. Type of hand sprayers that is useful for boom spraying when series of four nozzles or more are operating at the same time.

- a. Knapsack sprayer

Copyright 2025: Alexis T. Belonio

- b. Compressed-air sprayer
- ☒ c. Power sprayer
- d. None of the above

28. Mechanical or thermal device that produces liquid dispersion with less than 50 um volume median diameter.

- a. Knapsack sprayer
- ☒ b. Aerosol generator
- c. Compressed-air sprayer
- d. None of the above

29. Which of the following is the general classification of sprayers?

- ☒ a. Hand-and-power sprayers
- b. Compressed-air and knapsack sprayers
- c. All of the above
- d. None of the above

30. Spraying apparatus that transports or operates with power such as tractor, small engine or electric motor.

- a. Knapsack sprayer
- b. Compressed-air sprayer
- ☒ c. Power sprayer
- d. None of the above

7

31. Type of hand sprayers that is particularly useful for spot and small area application.

- a. Knapsack sprayer
- ☒ b. Compressed-air sprayer
- c. Power sprayer
- d. None of the above

32. Machine that cuts rice stalks and places them on a windrow where they are gathered and bound into sheaves and carried to a thresher.

- a. Scythe
- ☒ b. Stripper harvester
- c. Reaper
- d. Combines
- e. None of the above

33. Harvesting equipment that cuts the panicle and binds them together for ease of hauling to the threshing place.

- a. Combine

- b. Stripper
- ☒ c. Reaper/binder
- d. None of the above

34. Mechanical harvesting equipment that does not cut the panicle rather strips off grains from the panicles by combing action.

- ☒ a. Combine
- b. Stripper
- c. Reaper/binder
- d. None of the above

35. Machine used for combing the grain from the plant while the plant remains anchored to the soil.

- ☒ a. Reaper
- b. Stripper harvester
- c. Combine harvester
- d. All of the above

Copyright 2025: Alexis T. Belonio

CLSU ABELE REVIEW CLASS |

College of Engineering
Department of Agricultural and Biosystems Engineering

8

36. Equipment that is well-adopted for harvesting small grains, soybeans, grain sorghum, rice, and many others.

- a. Reaper
- b. Stripper
- ☒ c. Combine
- d. None of the above

37. This machine is powered by 60- to 150-hp industrial engine and is operated by one person.

- ☒ a. Self-Propelled Combine
- b. Pull-Type Combine
- c. Any of the above
- d. None of the above

38. Machine used for gathering silage crops such as grasses or straws for feeds.

- a. Cotton harvester
- ☒ b. Forage harvester *- reaper grass*
- c. Corn harvester
- d. None of the above

39. Mechanical thresher wherein the stalks with grains are fed into one of the threshing chambers and the materials moved axially until the straw is thrown out at the other end when all the grains are removed.

- ☒ a. Axial flow
- b. Through flow
- c. Mobile axial-flow
- d. None of the above

40. Axial-flow thresher which is simple and light weight for ease of movement in the field.

- ☒ a. Portable thresher with oscillating screen
- b. Portable axial-flow thresher without oscillating screen
- c. Mobile axial-flow thresher
- d. None of the above

41. Axial-flow thresher equipped with oscillating screen and centrifugal blower for screen winnowing.

- ☒ a. Portable thresher with oscillating screen
- b. Portable axial-flow thresher without oscillating screen
- c. Mobile axial-flow thresher
- d. None of the above

Copyright 2025: Alexis T. Belonio

9

42. Axial-flow type which is similar with the portable thresher with oscillating screen but larger in size usually equipped with support wheel for ease of transport.

- a. Portable thresher with oscillating screen
- b. Portable axial-flow thresher without oscillating screen
- ☒ c. Mobile axial-flow thresher
- d. None of the above

43. Device that generally removes excess moisture by forced ventilation either with or without addition of heat.

- a. Fryer
- b. Dehydrator
- ☒ c. Dryer
- d. None of the above

44. Mechanical dryer wherein the granular products pass continuously through a drying chamber utilizing an agitator until the products reach the specified moisture content reduction per pass and the subsequent cooling is effected by the use of tempering bins before subjecting them for another pass.

- a. Flat-bed dryer
- b. Recirculating-type dryer
- ☒ c. Continuous-flow dryer
- d. None of the above

45. Mechanical dryer used to remove moisture from a product by blowing artificially-heated air until the required moisture content is attained.

- ☒ a. Heated-air mechanical dryer
- b. Flat-bed dryer
- c. Unheated-air mechanical dryer
- d. None of the above

46. Mechanical dryer used to remove moisture from a product by blowing ambient air until the required moisture content is attained.

- a. Heated-air mechanical dryer
- b. Flat-bed dryer
- ☒ c. Unheated-air mechanical dryer
- d. None of the above

Copyright 2025: Alexis T. Belonio

10

47. Batch-type dryer with horizontal holding bin for granular products and is used for drying at a maximum drying layer thickness of 45 cm.

- a. Heated-air mechanical dryer
- ☒ b. Flatbed dryer
- c. Unheated-air mechanical dryer
- d. None of the above

48. Batch-type dryer with vertical holding bin and is used for drying at the same layer with that of the flat-bed dryer.

- a. Flat-bed dryer
- b. Deep-bed dryer
- ☒ c. Vertical-bin dryer
- d. None of the above

49. Batch dryer equipped with conveyors to circulate or mix granular products during drying.

- a. Flatbed dryer
- ☒ b. Recirculating-type dryer
- c. Continuous-flow dryer
- d. None of the above

Copyright 2025: Alexis T. Belonio

50. Type of mechanical dryer in which materials to be dried is placed in a bin or in a container, and air is forced through the mass until the material is dried.

- a. Continuous-gravity-flow dryer
- ☒ b. Batch or bin dryer
- c. Rotary dryer
- d. None of the above

51. Batch-type dryer normally used for drying granular products at a depth more than 45 cm and normally has longer drying time.

- a. Flat-bed dryer
- ☒ b. Deep-bed dryer
- c. Vertical-bin dryer
- d. None of the above

52. Machine that converts paddy to milled rice.

- a. Paddy husker
- b. Rice whitener
- ☒ c. Rice mill
- d. All of the above

11

53. General type of rice mills usually operated at the village level for custom milling.

- ☒ a. Single-capacity or single machine
- b. Large-capacity or multi machine
- c. Any of the above
- d. None of the above

54. General type of rice mills with capacity ranging from 2 to 4 tons per hour.

- a. Single-capacity or single machine
- ☒ b. Large-capacity or multi machine
- c. Any of the above
- d. None of the above

55. A kind of rice mill that employs only one whitening machine.

- a. "Kiskisan" rice mill
- ☒ b. Single-pass rice mill
- c. Rubber roll rice mill
- d. None of the above

56. Machine that removes foreign materials from paddy prior to rice milling.

- ☒ a. Paddy cleaner
- b. Paddy separator
- c. Paddy huller/husker
- d. None of the above

57. Machine that removes and separates husk from paddy.

- a. Paddy cleaner
- b. Paddy separator
- ☒ c. Paddy huller/husker
- d. None of the above

58. Example of a rice mill huller.

- a. Steel-fluted
- b. Rubber roll
- c. Disk
- d. Centrifugal
- ☒ e. All of the above

Copyright 2025: Alexis T. Belonio

12

59. Type of dehusker that combines dehusking and polishing processes in one operation.

- a. Steel huller
- b. Under-runner disc huller
- c. Rubber roll huller
- d. None of the above

60. A dehusker consisting of two horizontal-iron discs partly coated with abrasive layer.

- a. Rubber roll huller
- b. Steel huller
- c. Under-runner disc huller
- d. None of the above

61. A dehusker consisting of two rubber rolls rotating in opposite direction at different speed.

- a. Rubber roll husker
- b. Under-runner disc huller
- c. Steel huller
- d. None of the above

62. Type of pump with impellers rotating inside a closed casing which draws water into the pump through a central inlet opening and forces water out through a discharge outlet at the periphery of the housing by centrifugal force.

- a. Diffuser pump
- b. Centrifugal pump
- c. Volute pump
- d. None of the above

63. Type of pump that moves water by the upward and downward motions of the plunger.

- a. Axial-flow pump
- b. Mixed-flow pump
- c. Lift pump
- d. None of the above

64. Type of centrifugal pump in which its impeller is surrounded by a set of vanes.

- a. Diffuser pump
- b. Centrifugal pump
- c. Volute pump
- d. None of the above
