2

1. Actual coverage rate by an implement based on the total field time.

- a. Field efficiency
- b. Effective field capacity
- c. Theoretical field capacity
- d. None of the above

2. Ratio between the mass of fuel consumed per unit time and the corresponding power measured.

- a. Specific fuel consumption
- b. Fuel to mass ratio
- c. Fuel consumption rate
- d. None of the above

3. In trade circles, CIF stands for ____.

- a. Cash-In-Fist
- b. Cost, Insurance and Freight
- c. Cost-In Freight
- d. None of the above

4. Cost of machine including shipment.

- a. Free-on-board
- b. Freight-on-board
- c. Cost-in-freight
- d. None of the above

5. Distinguishing symbol affixed to products by a manufacturer in order to identify them as his goods.

- a. Trade name
- b. Trade mark
- c. Brand name
- d. All of the above

6. Name given by a manufacturer to his products to distinguish them from the ones produced by other manufacturers.

- a. Trade mark
- b. Manufacturer's name
- c. Brand name
- d. None of the above

Copyright 2025: Alexis T. Belonio

3

7. Booklet provided by manufacturers that gives the step-by-step procedure for repair or for disassembling parts of the machine.

- a. Operator's manual
- b. Technical manual
- c. Product catalog
- d. All of the above

8. Booklet provided by manufacturers that indicates the adjustment, care and maintenance procedure as well as the safety of the machine.

- a. Operator's manual
- b. Technical manual
- c. Product catalog
- d. None of the above

9. Amount paid for hiring equipment and for operating services in performing a certain task.

- a. Custom cost
- b. Operating cost
- c. Rental cost
- d. None of the above

Copyright 2025: Alexis T. Belonio

10. Change in the value of a machine due to wear and tear.

- a. Cost reduction
- b. Depreciation
- c. Lost of value
- d. None of the

11. PAES 101:2000 refers to ____.

- a. General Safety in Agricultural Machinery
- b. Operator's Manual Content and Presentation
- c. Method of Sampling
- d. All of the above

12. A safety gray color at the ASABE safety code is used for ____.

- a. floors or work areas around machines and equipment
- b. traffic and housekeeping areas
- c. areas with radiation hazard
- d. All of the above

4

13. In ASABE's safety code for laboratory equipment and typical applications, the safety yellow color stands for ____.

- a. danger stop
- b. warning
- ☒ c. caution *yellow*
- d. None of the above

14. When pipeline is painted with green and white color, it indicates that the pipe contains ____.

- ☒ a. liquid of inherently low hazard
- b. fire extinguishing materials
- c. flammable or explosive materials
- d. All of the above

15. ASABE classification for slow-moving vehicles such as animal-drawn or motorized conveyance, including implements in tow, should not exceed ____ travel speed.

- a. 30 kph
- ☒ b. 40 kph
- c. 50 kph
- d. None of the above

Copyright 2025: Alexis T. Belonio

16. For safety purposes, slow-moving vehicles such as agricultural machines must be provided with ____.

- a. rear bumper to protect the machine from impact
- ☒ b. identification emblem to guide motorists that the machine is slow moving
- c. signal light when travelling
- d. None of the above

Dimensions on = ?

17. An authorized dealer of a distributor or manufacturer to supply, trade, sell, and service agricultural machinery to end users.

- a. Supplier
- ☒ b. Dealer
- c. Service provider
- d. None of the above

18. Which of the following is not covered under warranty of agricultural machines?

- a. Accidental or natural disaster.
- b. Improper operation and maintenance of the machine.
- c. Unauthorized repair and/or use of non-genuine parts.
- ☒ d. All of the above
- e. None of the above

5

19. Protective device which is usually made of rail, fence or frame to keep dangerous parts of a machine out of reach inadvertently.

- a. Shield
- b. Casing
- ☒ c. Enclosure
- d. None of the above

20. Protective device designed and fitted to prevent dangerous parts of a machine from being reached from the side.

- ☒ a. Shield
- b. Casing
- c. Enclosure
- d. None of the above

21. Sum of money required to acquire machines.

- a. Production cost
- b. Overhead cost
- ☒ c. Investment cost
- d. None of the above

Copyright 2025: Alexis T. Belonio

CPEX
OPEX - operating

22. Protective device designed and fitted to prevent dangerous parts of a machine from being reached from all sides.

- a. Shield
- ☒ b. Casing
- c. Enclosure
- d. None of the above

23. Cost of using a machine per unit time, area, output, etc.

- a. Fixed cost
- b. Variable cost
- ☒ c. Operating Cost
- d. All of the above

24. Cost of materials, labor, and overhead in producing a machine.

- a. Material cost
- ☒ b. Production cost
- c. Investment cost
- d. None of the above

6

25. Cost of fabricated and standard components of a machine.

- a. Material cost
- b. Production cost
- c. Manufacturing cost
- d. All of the above

26. Cost of manpower in fabricating a machine.

- a. Fabrication cost
- b. Overhead cost
- c. Labor cost
- d. None of the above

27. Cost associated with the use of a machine.

- a. Operating cost
- b. Rental cost
- c. Custom cost
- d. All of the above

Copyright 2025: Alexis T. Belonio

28. Cost associated with the production of a machine but not classified as materials or labor, like transport of materials, consumables, etc.

- a. Production cost
- b. Overhead cost
- c. Operation cost
- d. None of the above

29. Cost associated with the utilization of a machine which includes depreciation, interest on investment, repair and maintenance, insurance, etc.

- a. Fixed cost
- b. Variable cost
- c. Total cost
- d. None of the above

30. Cost associated with the operation of a machine, particularly in terms of fuel, electricity, etc. consumed and of labor employed.

- a. Fixed cost
- b. Variable cost
- c. Total cost
- d. None of the above

7

31. Difference between the investment cost and the salvage value divided by the life span of the machine.

- a. Depreciation
- b. Interest on investment
- c. Insurance
- d. None of the above

32. Amount charged for a unit of machines based on manufacturing cost plus tax payable, and incorporating a certain percentage for mark-up.

- a. Investment cost
- b. Administrative cost
- c. Selling price
- d. None of the above

33. Sum of the production, selling, and administrative costs.

- a. Production cost
- b. Overhead cost
- c. Manufacturing cost
- d. None of the above

Copyright 2025: Alexis T. Belonio

34. Based on the Philippine Agricultural Engineers Standard (PAES), warranty for parts and services of a heated-air mechanical grain dryer is within ____ after the acceptance of the machine by the buyer.

- a. 12 months
- b. 18 months
- c. 24 months
- d. None of the above

35. According to PAES, warranty for the construction and durability of mechanical rice thresher shall be within ____ after the purchase of the machine.

- a. 6 months
- b. 12 months
- c. 18 months
- d. None of the above

36. Which of the following parts is treated to be dangerous as stated in the PAES for ensuring safety in agricultural machinery?

- a. Pulleys
- b. Clutches
- c. Coupling
- d. All of the above

8

37. Itemized list and cost estimates of fabricated and standard materials needed in the fabrication of a machine.

- a. Bill of lading
- b. Bill of payment
- ☒ c. Bill of materials
- d. All of the above

38. Service offered to customers by manufacturers in repairing and replacing unintentionally-damaged part of a machine for a specified period.

- a. Manufacturing service
- b. Customer's service
- ☒ c. After-sales-service
- d. All of the above

39. Number of years required to recover the cost of investment for a machine.

- a. Benefit-cost ratio
- b. Internal rate of return
- ☒ c. Payback period
- d. None of the above

Copyright 2025: Alexis T. Belonio

40. Indicator that attempts to summarize the overall value of money in using a machine.

- a. Percentage benefit over cost
- b. Cost-Benefit Ratio
- ☒ c. Benefit-Cost Ratio
- d. None of the above

41. Engine vibrates too much during threshing. What would you recommend to reduce vibration?

- a. Weld the engine into the frame of the thresher.
- b. Ask another person to firmly hold the engine.
- ☒ c. Tighten bolts and nuts at the engine frame of the thresher.
- d. None of the above

42. Profitability measure used to evaluate the efficiency of an investment on a machine, which is determined by dividing the return of an investment by the cost of the investment times 100.

- a. Payback period
- b. Benefit cost ratio
- ☒ c. Return on investment
- d. None of the above

9

43. Internal rate of return of a project is analyzed to see whether it is viable or not. Based on this, which of the statements below is true?

- ☒ a. The higher the internal rate of return, the more viable is the project.
- b. The lower the internal rate of return, the more viable is the project.
- c. The internal rate of return must be equal with the prevailing rate to make it viable.
- d. None of the above

44. Useful life of a machine before it becomes unprofitable for its original purpose due to obsolescence or wear.

- ☒ a. Economic life
- b. Life span
- c. Profitable life
- d. All of the above

Copyright 2025: Alexis T. Belonio

47. Ability of a machine to perform a timely operation that optimizes return from crop considering quality and quantity of the product.

- a. Operating time
- ☒ b. Timeliness
- c. Functional time
- d. None of the above

48. Periodic activities that must be done to prevent premature failure of a machine and to maintain its good functional performance.

- a. Repair
- b. Major overhaul
- ☒ c. Maintenance and Service
- d. All of the above

49. Assurance of the quality of materials and of workmanship of the product offered for sale or the length of satisfactory use expected from a product under normal use.

- a. After-sales service
- ☒ b. Warranty
- c. Insurance
- d. None of the above

10

50. Pattern efficiency of a circuitous-type field machine on a rectangular field.

- a. 93.0%
- b. 95.7%
- ☒ c. 94.8%
- d. None of the above
