

AB RENEWABLE ENERGY ENGINEERING

Engr. Alexis T. Belonio, MS, ABE, ASEAN Engineer
*Freelance Consultant and Technology Developer; Former
Senior Research Fellow (PhilRice) and
Associate Professor (Central Philippine University)
Member: PSABE, ASABE, ASME*

2

1. The act regulating the practice of agricultural and biosystem engineering in the Philippines.

- a. Republic Act No. RA 10915
- b. Republic Act No. 9513
- c. Republic Act No. 8749
- d. None of the above

2. The Renewable Act of 2008.

- a. Republic Act No. 8559
- b. Republic Act No. 9513
- c. Republic Act No. 8749
- d. None of the above

3. Which of the following is not a biomass?

- a. Rice husk
- b. Wood
- c. Coal
- d. Sugar bagasse
- e. None of the above

4. Which of the following is a renewable energy source? (BIGSHOW)

- a. Biomass
- b. Solar
- c. Wind
- d. Hydro
- e. Geothermal
- f. Ocean
- g. All of the above

5. Generates electricity from multiple, small-scale sources located near the point of consumption, offering enhanced reliability, efficiency, and reduced environmental impact compared to traditional large, centralized power plants. .

- a. Co-generation system
- b. Distributed generation system
- c. Biomass generation system
- d. None of the above

6. Which of the following is a non- renewable energy resource?

- a. Biomass
- b. Solar
- c. Wind
- d. All of the above
- e. None of the above

7. Which of the following is considered as a biomass material?

- a. Rice Husk
- b. Wood
- c. Coal
- d. Sugar bagasse
- e. All of the above
- f. Three of the above
- g. None of the above

8. An air that is used directly in the combustion of fuel.

- a. Primary air
- b. Secondary air
- c. Excess air
- d. All of the above
- e. None of the above

9. An air used to further burn the gases derived during combustion.

- a. Primary air
- b. Secondary Air
- c. Theoretical air
- d. None of the above

10. An air used to completely burn the fuel and convert its by product into ash.

- a. Theoretical air
- b. Excess air
- c. Stoichiometric air
- d. None of the above

4

11. An example of non-conventional power source.

- a. Ocean Thermal Energy Converter
- b. Underwater Turbine
- c. Wave Energy Converter
- d. All of the above
- e. None of the above

12. Which of the following is considered as biomass but not renewable?

- a. Peat
- b. Rice husk
- c. Coal
- d. None of the above

13. The Biofuel Act of 2006.

- a. Republic Act No. 9367
- b. Republic Act No. 9513
- c. Republic Act No. 8749
- d. None of the above

14. Which of the following is not a biofuel?

- a. Bioethanol
- b. Vegetable oil
- c. Bio oil
- d. All of the above
- e. None of the above

15. The Feed-In Tariff (standard offer contract) for solar power. (As of 2012)

- a. P9.68 per kW-hr
- b. P8.53 per kW-hr
- c. P5.80 per kW-hr
- d. P6.63 per kW-hr
- e. None of the above

16. The Feed-In Tariff for biomass power.

- a. P9.68 per kW-hr
- b. P8.53 per kW-hr
- c. P5.80 per kW-hr
- d. P6.63 per kW-hr
- e. None of the above

5

17. The Feed-In Tariff for wind power.

- a. P9.68 per kW-hr
- b. P8.53 per kW-hr
- c. P5.80 per kW-hr
- d. P6.63 per kW-hr
- e. None of the above

18. The Feed-In tariff for hydro power.

- a. P9.68 per kW-hr
- b. P8.53 per kW-hr
- c. P5.80 per kW-hr
- d. P6.63 per kW-hr
- e. None of the above

19. A device used to convert light to electricity.

- a. Solar collector
- b. Photovoltaic cell
- c. Thermoelectric chip
- d. None of the above

20. A device used to convert heat to electricity.

- a. Solar collector
- b. Photovoltaic cell
- c. Thermoelectric chip
- d. None of the above

21. Which of the following are the advantages of renewable energy?

- a. Supply of energy will not run out.
- b. Free or cheap energy source.
- c. Clean and does not produce pollution.
- d. Highly suitable for off-grid application.
- e. Suitable for decentralized operation.
- f. All of the above

22. Which are the disadvantages of RE?

- a. Expensive
- b. Weather dependent
- c. Location Specific
- d. Wider area is required to produce power.
- e. Application Specific
- f. All of the above

6

23. A renewable energy source which can be derived from earth crust which is used to produce electricity and heat.
- Hydro
 - Ocean
 - Geothermal
 - All of the above
24. Form of renewable energy derived from the motion of ocean waves generated by _____ transferring energy to the water's surface.
- water
 - wind
 - sun
 - None of the above
25. A renewable energy source derived from the natural rise and fall of ocean _____ which harnesses the kinetic energy of moving water to generate electricity through turbines or barrages.
- waves
 - heat
 - tides
 - All of the above
26. A renewable energy technology that harnesses the temperature difference between warm surface waters and cold deep ocean waters to generate electricity.
- Ocean thermal energy converter
 - Wave energy converter
 - Tidal energy converter
 - All of the above
27. A technology that uses sunlight to generate heat, which can then be used for various applications, including heating, electricity generation, and industrial processes.
- Solar photovoltaic system
 - Solar thermal energy system
 - All of the above
 - None of the above
28. Converts sunlight into dc electricity using silicon cells to generate direct current (DC) electricity when exposed to sunlight.
- Solar thermal energy system
 - Solar photovoltaic energy system
 - All of the above
 - None of the above

7

29. A renewable energy source derived from organic matter, like plants and animals for heating, electricity generation, and transportation fuel.
- Biomass energy
 - Geothermal energy
 - Wind energy
 - Solar energy
 - All of the above
30. A renewable energy technology that capture the wind's kinetic energy, are used to turn a generator and produce electricity.
- Wind mill
 - Wind pump
 - Wind turbine
 - All of the above
31. A renewable energy source that harnesses the power of moving water to generate electricity.
- Wave
 - Tidal
 - Hydro
 - All of the above
32. Environmental benefits of renewable energy.
- Reduced Greenhouse Gas Emissions
 - Cleaner Air and Water
 - Reduced Reliance on Fossil Fuels
 - Land Use Benefits
 - Lower Water Usage
 - All of the above
 - Two of the above
33. Economic Benefits of Renewable Energy.
- Job Creation
 - Economic Growth
 - Energy Independence
 - Cost Savings
 - Rural Electrification
 - All of the above
 - Three of the above
